SUMMARY

Recent CSE (AI/ML) graduate with hands-on experience building real-world ML systems, LLM-powered applications, and backend services. Led development of a production-ready application with a team of 7. Strong in Python, FastAPI, React, and MongoDB, with focus on building reliable, end-to-end systems.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript

ML / AI: Scikit-learn, TensorFlow, Keras, Ensemble Learning, OpenCV, Pandas, NumPy

Tools: VS Code, Git, GitHub, Postman

Web / Backend: React.js, FastAPI, Node.js, Express.js, JWT, OAuth 2.0, HTML5, CSS3

Databases & APIs: MongoDB, MySQL, Google Sheets API, ETL Pipelines, REST APIs

EXPERIENCE

AI Engineer Intern (Project Lead)

Jan 2026 – Apr 2026

Detagenix Private Limited

Remote

- Led 7 AI interns in delivering an AI-powered CRM platform – managed sprint planning, task delegation, and technical unblocking across the team.
- Built an ML-based lead classification system using ensemble learning (Random Forest, 88% accuracy) to score and categorize leads as hot/warm/cold; adopted ensemble methods to compensate for limited training data.
- Designed a Conversation Intelligence Engine using an LLM pipeline to extract structured insights (pain points, urgency, next actions, deal-risk flags) from call transcripts, WhatsApp chats, and meeting notes.
- Developed a natural language CRM chatbot (Gemini API) that converts user queries into validated MongoDB operations, and a Smart Email Generator that auto-drafts follow-ups using lead history and deal stage.
- Built a scheduled ETL pipeline (Google Sheets → MongoDB via Service Account) with automated normalization, upserts, and batch ML inference; secured the platform with JWT auth and role-based access control.

PROJECTS

MailForge – AI-Assisted Email Management Platform

Next.js, React, Supabase, OpenRouter, Resend, Tailwind CSS

Apr 2026 - May 2026

- Built an AI-assisted email management platform designed to help non-technical teams create, manage, and refine transactional and marketing email templates
- Incorporated OpenRouter to support AI-driven content generation, tone refinement, subject line suggestions, and template improvement workflows across multiple LLMs
- Designed dynamic placeholder handling and responsive preview systems to simulate real-world email personalization across desktop and mobile views
- Implemented secure authentication, template storage, and dashboard analytics using Supabase Auth and PostgreSQL
- Integrated Resend API for real-time test email delivery, enabling template validation directly within the platform

MirAI 2.0 – Personal AI Assistant

Python, PySide6, OpenRouter API, Serper.dev, wttr.in, PyInstaller

Oct 2025 - Dec 2025

- Designed and developed a multi-panel desktop AI assistant using PySide6, enabling structured user interaction across distinct functional panels
- Integrated OpenRouter API to route queries across multiple LLMs based on task type, supporting diverse NLP workloads from a single interface
- Built utility modules for real-time web search (Serper.dev), weather data retrieval (wttr.in), reminder scheduling, and system media controls
- Packaged the full application into a standalone executable using PyInstaller, eliminating dependency setup for end users

EDUCATION

Vellore Institute of Technology – B.Tech CSE, Specialization in AI/ML

Bhopal, Madhya Pradesh, India

Oct 2022 – Apr 2026

CGPA: 8.66 / 10.0

ACHIEVEMENTS & CERTIFICATIONS

Amazon ML Summer School 2025 – Selected among ~3,000 students nationwide. | **Flipkart GRiD 7.0 (2025)** – National Semi-Finalist. | **Robotics & Coding Competition** – 2nd Place (University level).

Certifications: Blockchain Developer – IBM | MERN Full Stack – Ethnus/Codemithra | Applied ML in Python – Univ. of Michigan (Coursera)
